Re: Cleveland-Cliffs Minorca Mine Inc.
1st Quarter 2022 Excess Emissions and Monitoring System Performance Reports
Federal Implementation Plan for Regional Haze (FIP)

On behalf of Cleveland-Cliffs Minorca Mine Inc. (Minorca), I am submitting the enclosed Excess Emissions and Monitoring System Performance Reports for the 1st quarter of 2022 as required by 40 CFR 52.1235(e)(7). It should be noted that while the continuous emissions monitoring requirements of the FIP were in effect in the reporting period, the emission limitation for NO_X is not yet applicable. 40 CFR 52.1235(b)(1)(v)(A) specifies that the NO_X limitation will become enforceable *"...55 months after May 12, 2016 and only after EPA's confirmation or modification of the emission limit..."*.

Minorca submitted a revision of the 38.16 lb SO_2/hr on a 30-day rolling average limit to U.S. EPA in accordance with 40 CFR 52.1235(b)(2)(v) on April 6, 2018. That section of the FIP provides that Minorca "may calculate a revised SO_2 limit based on one year of hourly CEMS emissions data reported in lbs SO_2/hr and submit such limit, calculations, and CEMS data to EPA." This provision to modify the SO_2 limit exists because EPA recognized that the initial SO_2 limit was based on "limited stack test data" (78 Fed. Reg. 8718) and did not reflect the variability of Minorca's operations. The revised emission limit calculation methodology follows the provisions of 40 CFR 52.1235(b)(2)(v) and results in an updated emission limit of 58.64 lbs SO_2/hr based on a 30-day rolling average (prior to adjusting to account for operating levels of the Minorca furnace which were less than capacity during the data collection period). Adjusting to reflect the emissions associated with operation of the furnace at capacity using the above equation results in a limit of 73.79 lbs SO_2/hr based on a 30-day rolling average. The revised limit became effective on the April 6, 2018 date of submittal of the limit revision package.

These reports were developed following the procedures and practices described in the Site Specific Monitoring Plan (SSMP) required by 40 CFR 52.1235(e)(8) and submitted to EPA on December 1, 2016.

Please contact Jaime Johnson, Minorca's Environmental Manager, at (218) 305-3337 should you have any questions or comments regarding this report.

Sincerely,

Robb Peterson
Operations Manager

Enclosed: 1st Quarter 2022 Excess Emissions and Monitoring System Performance Reports
1st Quarter 2022 CGA Summary Reports for SV 014-017, NO_X and SO_2

cc: Jaime Johnson (Cleveland-Cliffs Minorca Mine Inc.)

Emission Limitation:	58.64 lb SO2/hr / 73.79 lb SO2/hr, 30-day rolling average. See Footnote [1].
Monitor Manufacturer, Model No., & Serial:	See downtime reports for individual stacks.
Date of Latest CMS Certification or Audit:	See downtime reports for individual stacks.
Operating time for EDS:	86.71 Day(s)
Operating time for CMS:	86.71 Day(s)

Emission Data Summary		
1.	Duration of excess emission in reporting period due to:	
	a. Startup/shutdown	0
	b. Control equipment problems	0
	c. Process Problems	0
	d. Other known causes	0
	e. Unknown causes	0
2.	Upset Conditions	0
3.	Total Duration (Subtracts Exclusions and Upset Conditions)	0
4.	Time of Excess Emission as a percentage of operating time	0.00
5.	Time in compliance as percentage of operating time	100.00

CMS Performance Summary		
1.	CMS downtime in reporting period due to:	
	a. Monitor equipment malfunctions	0
	b. Non-Monitor equipment malfunctions	0
	c. Quality assurance calibration	0
	d. Other known causes	0
	e. Unknown causes	0
2.	Total CMS Downtime	0
3.	Total Downtime as a percentage of operating time	0.00
4.	Total Availability as a percentage of operating time	100.00

[1] Minorca established the 58.64 lb SO2/hr on a 30-day rolling average basis limit via submittal of one year of CEMS data to the EPA on April 6, 2018 (prior to adjusting to account for operating levels of the Minorca furnace which were less than capacity during the data collection period). Adjusting to reflect the emissions associated with operation of the furnace at capacity using the above equation results in a limit of 73.79 lbs SO2/hr based on a 30-day rolling average.

There were no periods of excess emissions during this reporting period.

There were no periods of monitor downtime during this reporting period except for the daily zero and span checks.

CMS downtime reported for EU026 SO2 monitoring includes all downtime from the SO2 concentration and Stack Flow analyzers installed on SV014, SV015, SV016, and SV017 if the minimum data availability required by 52.1235(c)(4)(viii)(C) are not met after the application of secondary data calculations used to determine "emission rates when CEMS data is not available due to downtime associated with QA/QC events" as required by 40 CFR 52.1235(e)(8)(iv). These calculations are described in detail within the site specific monitoring plan (SSMP) which was submitted to the EPA per the requirements of 40 CFR 52.1235(e)(8). Please refer to the downtime reports for the individual stack analyzers for details on their operation during the reporting period.

There were no changes in continuous monitoring systems, processes, or controls that would have invalidated the CEMS certification test or adversely affected its ability to accurately measure the emissions from the indurating furnace during this reporting period.

Quarterly Excess Emissions and Monitoring System Performance Report

EU 026 - Combined NOx Emissions and Monitor Downtime

CMS Data from: EU26_NOx_30D_LbPerMBtu_1D
EDS Data from: N/A
Emission Limitation: 1.5 lb NOx/MMBtu, 30-day rolling average. See Footnote [1].

Monitor Manufacturer, Model No., & Serial: See downtime reports for individual
Date of Latest CMS Certification or Audit: See downtime reports for individual
Operating time for CMS: 86.71 Day(s)

CMS Performance Summary	
1. CMS downtime in reporting period due to:	
a. Monitor equipment malfunctions	0
b. Non-Monitor equipment malfunctions	0
c. Quality assurance calibration	0
d. Other known causes	0
e. Unknown causes	0
2. Total CMS Downtime	0
3. Total Downtime as a percentage of operating time	0.00
4. Total Availability as a percentage of operating time	100.00

[1] The emission limitation does not apply until 55 months after May 12, 2016 and approval by EPA. The EPA has not yet confirmed the 1.5 lb/MMBtu NOx emission limit proposed by Minorca in its September 11, 2020 submittal per 40 CFR 52.1235(b)(1)(v)(A)(6). The Indurating Furnace did not exceed 1.5 lb NOx/MMBtu on a 30-day rolling average basis in this quarter.

There were no periods of monitor downtime during this reporting period except for the daily zero and span checks.

CMS downtime reported for EU026 NOx monitoring includes all downtime from the NOx concentration and Stack Flow analyzers installed on SV014, SV015, SV016, and SV017 if the minimum data availability required by 52.1235(c)(4)(viii)(C) are not met after the application of secondary data calculations used to determine "emission rates when CEMS data is not available due to downtime associated with QA/QC events" as required by 40 CFR 52.1235(e)(8)(iv). These calculations are described in detail within the site specific monitoring plan (SSMP) which was submitted to the EPA per the requirements of 40 CFR 52.1235(e)(8). Please refer to the downtime reports for the individual stack analyzers for details on their operation during the reporting period.

There were no changes in continuous monitoring systems, processes, or controls that would have invalidated the CEMS certification test or adversely affected its ability to accurately measure the emissions from the indurating furnace during this reporting period.
